Xizhi Tang

Atlanta, GA 30308 | 949-998-0608 | xtang330@gatech.edu | US PR | No Security Clearance

Objective

Seeking a chip design / hardware engineering internship starting May 2026. ECE student with strong fundamentals in digital logic, circuits, and programming, plus hands-on experience with hardware bring-up and debugging. Delivers clean, testable work and learns new tools fast to support tape-in/tape-out, verification, or FPGA/ASIC teams.

Education

Georgia Institute of Technology | Atlanta, GA *Aug 2025 – Present*
Bachelor of Science in Electrical Engineering, GPA 3.81 Expected Graduation, May 2029

Skills

Programming: Python, MATLAB, SystemVerilog
Platforms: Linux, Windows, Git/GitHub
Hardware: STM32 microcontrollers, ADC/SPI/I2C/UART, oscilloscope, logic analyzer, bench power supply, DMM
Software: Altium Designer, KiCad, Intel/Altera Quartus, ModelSim/HDL simulation tools, VS Code, GitHub, Microsoft Excel
Professional Organizations: Yellow Jacket Space Program (Avionics), RoboJackets RoboCup
Communication: Design reviews, lab documentation, technical reports, presentations
Languages: English (fluent), Chinese (native)

Experience

UCLA NeuroLife Lab | Los Angeles, CA *Jul – Sept 2024*
Intern

- Research Intern, Dept. of Neurosurgery / Integrative Biology & Physiology (Dr. Fernando; Supervisor: Lily Ying) — studied autonomic nervous system and how diet/exercise affect neurological conditions.
- Worked with 3 postdocs on experiment prep and data entry; supported 15+ mouse TBI studies using fluid percussion injury and analyzed brain–body effects (e.g., T4 hormone impact on liver metabolism after injury).

Department of Materials Science, Fudan University | Shanghai, China *May – Jun 2024*
Intern

- Helping to develop a solar-evaporation wastewater purification material using a modified ore tailings + acrylate composite photothermal coating.
- Supported full lab workflow with graduate students: material prep, coating (drawdown rod), mixing (ultrasonic homogenizer), separation (centrifuge), and testing (goniometer wettability; Xenon lamp + digital thermometer for photothermal performance).

Projects

Rapid Test Board | Yellow Jacket Space Program (YJSP) - Avionics *Nov 2025*
PCB Designer

- Designed and updated RTB schematics/PCB for 24V→5V/3.3V power and MCU/ADC-based sensing; improved bench bring-up speed and reduced integration risk through iterative reviews.
- Executed lab validation (continuity, power-up, signal checks) and produced structured bring-up documentation for the avionics team; enabled faster debug and repeatable testing across builds.

Relevant Coursework

Circuit Analysis: DC/AC circuits; node/loop analysis; Thevenin/Norton; op-amps; phasors; Bode plots; Laplace

Fundamentals of Digital System Design: Boolean logic/K-maps; binary arithmetic; latches/registers & FSMs; memory basics; datapath + RISC/assembly

Introduction to Signal Processing: Discrete-time LTI systems; sampling; convolution; frequency response; DFT; z-transform; MATLAB DSP labs

Activities

RoboJackets RoboCup | Electrical Hardware Engineer *Aug 2025 – Present*

- Contribute to electrical & embedded development of automotive identification board for team's robotic soccer platform.
- Collaborate with mechanical & software subteams to iterate hardware designs and validate functionality through bench testing.
